I am a researcher and software engineer with a strong background in high-performance computing (HPC), distributed systems, and combinatorial optimization. I have extensive experience designing and implementing software solutions that balance performance and productivity, leveraging technologies such as CUDA, OpenMP, MPI, and high-productivity languages like Chapel. I am particularly focused on improving computational efficiency in large-scale systems. My work includes optimizing large-scale applications, collaborating with interdisciplinary teams, and contributing to research through publications, workshops, and software development. My profile also includes significant pedagogical and mentorship experience, having delivered over 650 hours of instruction at the graduate and undergraduate levels across four higher education institutions in two countries, and supervised student research projects and monographs.

SKILLS

HPC & Programming	C/C++, CUDA, Python, Chapel, OpenMP, MPI, HIP, AVX, PGAS
Performance Profiling & Analysis	NVIDIA Nsight Systems, NVProf, PERF, Intel VTune, LIKWID
Platforms & Tools: Linux/Unix	Git, Build Systems (CMake, Make), Containers (Docker, Singularity)
Domain Expertise	HPC, Distributed Systems, GPU computing, combinatorial optimization

LANGUAGES

- Portuguese (Native), English (full professional proficiency), French (professional working proficiency).

EDUCATION

PhD in Computer Science 2013 - 2017
Federal University of Ceará (UFC). Fortaleza - CE, Brazil

- *International mobility*: from September 2015 to August 2016 at INRIA Lille - Nord Europe, under the supervision of Prof. Nouredine Melab (Dolphin team).
- *Thesis*: GPU-Based Backtracking Strategies for Solving Permutation Combinatorial Problems. *Supervisor*: Dr. Francisco Heron de Carvalho Junior.

Master's Degree in Computer Science 2010 - 2012
State University of Ceará (UECE). Fortaleza - CE, Brazil

- *Thesis*: GPU-based branch-and-bound algorithms for the asymmetric travelling salesman problem (*text in Portuguese*). *Supervisors*: Dr. Gustavo Augusto Lima de Campos and Dr. Marcos Negreiros.

Bachelor's Degree in Computer Science 2004 - 2009
State University of Ceará (UECE). Fortaleza - CE, Brazil

- *Monograph*: The Jurema Method: a new branch-and-bound strategy for the asymmetric travelling salesman problem (*text in Portuguese*) *Supervisor*: Dr. Marcos Negreiros.

High School 2001 - 2003
Colégio Ari de Sá Cavalcante. Fortaleza - CE, Brazil

AWARDS AND HONORS

Outstanding Paper Award 2021
International Conference on High Performance Computing & Simulation (HPCS 2020)

- For the work *Towards Chapel-based Exascale Tree Search Algorithms: dealing with Multiple GPU Accelerators*

Certification of Outstanding Contribution in Reviewing 2016
Journal of Parallel and Distributed Computing (JPDC)

- Recognition for significant contributions in the peer-review process during the year 2016.

WORK EXPERIENCE

Project Researcher

Feb 2023 - Present

Ultra-Scale Computing for Solving Big Optimization Problems (UltraBO)

Remote, bilateral international scientific project (France/Luxembourg) | ANR/FNR Funded (2023–2026).

- Researched and implemented scalable, heterogeneous parallelization strategies to optimize complex combinatorial solvers with a focus on code portability.
- Focused on the design and implementation of high-performance exact methods (e.g., Branch & Bound and Backtracking).
- Strongly contributed to the conception and writing of the UltraBO project and successfully secured multi-year ANR/FNR funding.
- Published several papers in top-tier journals and conferences, gave several invited talks and seminars.
- Demonstrated expertise in securing and managing objectives under a multi-year international funding agreement.

Technologies:

Programming Models: PGAS, Distributed Computing, GPGPU, and Hybrid.

Programming Languages: CUDA-C, HIP, Chapel, MPI, OpenMP.

Senior Researcher

Sep 2022 - Jan 2025

Imec

Leuven, Belgium

Worked at Imec, a leading European research institute, developing a distributed software infrastructure for an European HPC and AI Processor.

- Participated in the development of a distributed programming library based on PGAS.
- Developed a distributed process management system in Bash for spawning and managing processes across cluster machines.
- Designed and implemented testing and profiling software for performance evaluation of HPC applications.
- Collaborated with multiple teams, programming and analyzing benchmarks to support hardware design research and performance evaluation.
- Contributed to the Supercomputing 2024 exhibit flyer, showcasing the ExaScience HPC Software Lab's work on cost-effective scaling of performance-oriented HPC and AI software

Technologies:

Programming Models: PGAS, Distributed Computing, GPGPU, and Hybrid.

Programming Languages: Bash, CUDA-C, Chapel, D, MPI, OpenMP, and Python.

Profiling Tools: Nsight Systems, NVProf, PERF, Intel VTune, and LIKWID.

Benchmarking Domains: BLAS, FEM, stencil applications, combinatorial optimization, and HPCG.

Research associate

Mar 2021 - Sep 2022

University of Luxembourg

Belval, Luxembourg

Member of the Parallel Computing & Optimisation Group (PCOG), contributing to the EuroCC project (promoting HPC in Luxembourg) and the productivity-aware ultra-scale optimization project.

- . Designed and implemented large-scale distributed optimization algorithms, focusing on CPU-GPU heterogeneity and balancing programming productivity with parallel efficiency.
- . Collaborated with interdisciplinary teams to advance HPC adoption.
- . Organized a workshop and authored tutorial sessions on HPC and optimization.

Postdoctoral researcher

Nov 2018 - Jun 2020

INRIA Lille - Nord Europe

Lille, France

Worked at INRIA, France's leading research institute in digital science, researching high-productivity languages for large-scale distributed exact optimization algorithms.

- . Lead researcher of the Chapel-based Optimization Project (ChOP), recognized by the Chapel Team (Cray-HPE) as one of the key projects using the Chapel language.
- . Researched and developed distributed large-scale applications, focusing on balancing productivity and parallel efficiency in branch-and-bound optimization algorithms.
- . Worked with high-productivity languages including Chapel, Julia, and Python/Numba, alongside C/C++ (OpenMP and MPI) for performance baselines and benchmarking.
- . Taught in the Master's Program in Nano-science and Nano-technologies for Civil Engineering at the University of Lille and organized tutorial and workshops on HPC and optimization.
- . Published several papers in top-tier journals and conferences, contributing to advances in parallel optimization.

Technologies:

Programming Languages: Chapel, Julia, Python/Numba, C/C++ (OpenMP, MPI).

Research Focus: High-productivity languages, combinatorial optimization, distributed branch-and-bound algorithms.

Postdoctoral researcher

Mar 2018 - Oct 2018

Federal Institute of Education, Science and Technology of Ceará (IFCE).

Fortaleza-CE, Brazil

Researched the parallelization of deep learning and machine learning applications for computer vision.

- . Developed and optimized parallel implementations of deep learning models for computer vision applications.
- . Accelerated image processing and inference tasks using CUDA and OpenCV.
- . Leveraged cloud-based computing via Google Colaboratory for large-scale model training and experimentation.

Technologies:

Languages & Frameworks: CUDA, OpenCV, TensorFlow, Keras, PyTorch, and YOLO.

Computing Platforms: Google Colaboratory and GPU acceleration.

Researcher - International mobility

Sep 2015 - Aug 2016

INRIA Lille - Nord Europe

Lille, France

One-year research visit as part of PhD studies, supported by the PDSE-CAPES program.

- . Conducted research on parallel optimization with the Dolphin team under the supervision of Prof. Nouredine Melab.

- . Explored high-performance computing techniques to enhance optimization algorithms.
- . Funded by the Institutional Program of Overseas Sandwich Doctorate (PDSE-CAPES), *Grant* 3376/2015-00.

Doctoral Researcher

Federal University of Ceará (UFC)

Mar 2013 - Dec 2017

Fortaleza-CE, Brazil

Member of the Parallelism, Graphs, and Optimization Group (ParGO) in the Graduate Program in Computer Science (MDCC).

- . Researched and implemented exact parallel and heterogeneous algorithms to solve combinatorial optimization problems.
- . Investigated the use of CUDA Dynamic Parallelism (CDP) to enhance performance in solving large optimization problems.

Technologies:

Languages: C/C++, MPI, CUDA, OpenCL, OpenMP and vectorization.

Accelerators: GPUs and Xeon Phi.

Lecturer

State University of Ceará (UECE), Computer Science Department

Aug 2012 - Jul 2014

Fortaleza-CE, Brazil

Taught 4 different courses, supervised 3 Bachelor's degree monographs, a research internship, and a young researcher project (see Tables 4 and 3).

Lecturer

Christus University Center (UniChristus), Informatics Department

Aug 2012 - Jul 2013

Fortaleza-CE, Brazil

Taught compilers and automata theory (see Table 4).

Master student / Research intern

State University of Ceará (UECE)

Mar 2010 - Jun 2012

Fortaleza-CE, Brazil

Member of the Scientific Computing Laboratory (LCC) in the Graduate Program in Computer Science(MACC).

- . Investigated the feasibility of using GPUs for exact tree-based optimization, pioneering research in this area at the time.
- . Worked with C/C++, OpenMP, and CUDA.

Research intern

State University of Ceará (UECE)

Mar 2008 - Jul 2009

Fortaleza-CE, Brazil

Intern at the Computer Networks and Security Laboratory (LARCES).

- . Focused on the design and implementation of bio-inspired distributed algorithms to solve peer-to-peer (P2P) network problems.
- . Worked primarily with Java and the JXTA P2P protocol.

Trainee

State University of Ceará (UECE)

Feb 2007 - Sep 2007

Fortaleza-CE, Brazil

Programmed embedded commercial C++ applications for x86 micro-terminals. Contributed to a project in cooperation with Bematech Co., a Brazilian company specializing in software and hardware solutions for commerce.

PARTICIPATION IN RESEARCH PROJECTS

Ultra-scale Computing for solving Big Optimization Problems 2023 - present
In collaboration with researchers from the Univ. of Lille, France, and the Univ. of Luxembourg

Summary: This project focuses on combining exact methods (e.g., Branch-and-Bound) with metaheuristics (e.g., Evolutionary Algorithms) to solve large-scale optimization problems efficiently, leveraging MPI+X and PGAS-based approaches.

Funding: French National Research Agency (ANR) & Luxembourg National Research Fund (FNR).

Parallel Algorithms for Combinatorial Optimization and Complexity 2022 - present
In collaboration with researchers from the ParGO group at UFC, Brazil, and other universities

Summary: This project focuses on developing models, formulations, and structural properties for combinatorial optimization problems, particularly in graph coloring, graph connectivity, and graph diffusion.

Funding: Foundation for Scientific Development of the Ceará State (FUNCAP), Brazil.

HPC Shelf - A Component-Based Cloud Computing Platform for HPC Applications and Services 2013 - 2017

ParGO Research Group, Federal University of Ceará (UFC), Brazil

Summary: HPC Shelf is a component-based cloud computing platform designed to support the development, deployment, and execution of HPC applications. Addresses problems that require substantial computational power, which justifies the integration of multiple parallel computing platforms to meet domain-specific needs.

Funding: National Council for Scientific and Technological Development (CNPq), Brazil.

Exact Combinatorial Methods for Dynamic Grouping Problems

2010

Federal University of Santa Maria (UFSM), Santa Maria-RS, Brazil

Summary: A scientific mission by the Federal University of Santa Maria, in collaboration with the State University of Ceará, focused on developing new exact and heuristic algorithms to solve Dynamic Grouping Problems.

Funding: National Council for Scientific and Technological Development (CNPq), Brazil.

SOFTWARE CONTRIBUTIONS

Chapel-based Optimization (ChOp)

Status: *Active*

🔗 *tcarneirop/ChOp*

Lines of code: 100K+

A project focused on designing and implementing large-scale exact distributed optimization algorithms, considering CPU-GPU heterogeneity while balancing high productivity and parallel efficiency through the use of the Chapel Language.

Features:

Large-scale Distributed Algorithms: Optimized for CPU-GPU heterogeneity.

Solving Big Problems: Final algorithms tackle FSP and ATSP to optimality.

Pioneering Work: A new approach to parallel exact optimization.

Multicore and Distributed Search: High-performance backtracking searches to solve permutation-based combinatorial problems in Chapel.

Minimal Performance Loss: Achieves low performance loss compared to baselines.

Cross-Platform Comparison: Baselines include OpenMP, MPI, CUDA, HIP, and SYCL for performance benchmarking.

Recognition & Impact:

- . Featured by the Chapel team (Cray/HPE) as a key Chapel-based project – "Chapel in Production".
- . ChOp's CUDA N-Queens included in HeCBench, a collection of Heterogeneous Computing benchmarks supporting SYCL compiler development².
- . Used by the Chapel team for GPU code validation.^{3,4}

Selected Publications: Carneiro *et al.* (2020, 2021 and 2024).

Platform-aware Programming

Status: *Active*

🔗 *PlatformAwareProgramming*

Lines of Code: 5k+

PlatformAware.jl is a package that aims at helping HPC package developers write Julia code for different versions of kernels according to the target platform.

Features:

²<https://www.intel.com/content/www/us/en/developer/articles/success-story/repo-evaluating-performance-productivity-oneapi.html>

³<https://chape-lang.org/CHIUIW/2023/KayrakliogluSlides.pdf>

⁴<https://chapel-lang.org/perf/gpu/?graphs=choptime>

Structured Platform-Aware Programming: structured approach to writing code that adapts to different execution platforms.

Multiple Dispatch: leverages Julia’s multiple dispatch system to select appropriate code versions based on platform features.

Performance Tuning: facilitates the use performance tuning techniques to optimize code for target platforms.

Publications: de Carvalho Junior, F.H; Carneiro, T. (2023) and de Carvalho Junior, F.H. *et al.* (2023).

Chapel-based P3D-DFS

Status: *Active*

🔗 *Guillaume-Helbecque/P3D-DFS*

Lines of Code: 10k+

Description: Distributed work stealing written in Chapel for solving combinatorial optimization problems. By leveraging Chapel’s parallel programming capabilities, **P3D-DFS** efficiently handles distributed computations across multiple nodes in a cluster, ensuring scalability and high performance.

Features:

Adaptability: A generic solution applicable to a broad range of tree-based combinatorial optimization problems.

Distributed Work Stealing: Utilizes a work stealing mechanism to dynamically balance the workload across distributed nodes.

Scalability: Efficiently scales to handle large problem sizes across multiple nodes in a cluster.

Selected publications: Helbecque et al. (2023, 2024).

Formula Optimizer

Status: *Inactive*

🔗 <https://bitbucket.org/formulapaper/formulapaper/src/master/>

Lines of Code: 3k+

Java-based software with a JavaFX GUI that enables users to easily formulate and solve multi-objective combinatorial optimization problems without programming expertise. It generates code for the jMetal framework, a popular metaheuristics library in Java, and provides real-time execution metrics.

Features:

User-Friendly Interface: Allows users to define optimization problems without programming knowledge.

Code Generation: Automatically generates Java code for solving problems using the jMetal framework.

On-line Metrics: Provides real-time metrics during execution for performance monitoring.

Efficient Execution: Solves problems with minimal performance loss compared to existing solvers.

Publication: Nepomuceno *et al.* (2016).

GRANTS

French National Funding Agency (ANR) and the Luxembourg Research Fund (FNR)

Project: Ultra-scale Computing for solving Big Optimization Problems

Grant: ANR-22-CE46-0011, INTER/ANR/22/17133848

Jan 2023 – dez 2026

Strongly contributed to the conception and writing of the UltraBO project and successfully secured multi-year ANR/FNR funding.

Partnership for Advanced Computing in Europe - PRACE

Project: EU2022D08-197, ID:90254

Ago 2022 – Sep 2023

Awarded grant support for the ChOP project, consisting in 2,000 GPU hours on the Czech National Supercomputing Center (IT4Innovations).

Foundation for Scientific Development of the Ceará State (Funcap - Brazil)

Grant: PS1-00186-00155.01.00/21

Jan 2022 – Jan 2023

Grant support for the project *Parallelism and Algorithms for Combinatorial Optimization and Complexity (PAPOCCO)*, ParGO research group, Federal University of Ceará (UFC- Brazil).

Centre de Recherche en Informatique, Signal et Automatique de Lille (CRISAL - France)

Travel grant

Dez 2019

Fully supported for a two-week visit to Cray Inc. in Seattle, USA, to collaborate with the Chapel team, in support of my research at INRIA Lille (2018–2020).

Institutional Program of Overseas Doctorate (PDSE-CAPES - Brazil)

Grant: 3376/2015-00

Sep 2015 – Aug 2016

One-year research visit to INRIA Lille, France (as part of PhD studies), supported by the PDSE-CAPES program of the Brazilian Ministry of Education.

Coordination for the Improvement of Higher Education Personnel (CAPES - Brazil)

Full Scholarship

Jun 2013 – Apr 2017

Scholarship awarded for my PhD studies based on a selection process.

Coordination for the Improvement of Higher Education Personnel (CAPES - Brazil)

Full Scholarship

Mar 2010 – Feb 2012

24 months scholarship for my Master’s studies awarded based on a selection process.

Table 2: Examination committee membership summary

Level	Institutions	Total
Master’s Thesis Defense	UERJ, IFCE	2
Master’s Thesis Proposal defense	UERJ	1
Undergraduate Final Project Defense	UECE, UFC, UniChristus	6
Total		9

EXAMINATION COMMITTEE

Served as a member of the thesis/dissertation committee for 3 Master’s and 6 undergraduate final project defenses, as shown in Table 2.

Master’s Thesis Defense Committees

- . **Barros, D. A.**, Master’s Thesis Defense, *Evaluating Shared Memory Parallel Computing Mechanisms of Julia Language*, State University of Rio de Janeiro (UERJ), 2023.
- . **Barros, D. A.**, Master’s Thesis Proposal Defense, *Evaluating Shared Memory Parallel Computing Mechanisms of Julia Language*, State University of Rio de Janeiro (UERJ), 2021.
- . **Medeiros da Nóbrega, R. V.**, Master’s Thesis Defense, *Lung Nodule Malignancy Classification in Chest Computed Tomography Images Using Transfer Learning And Convolutional Neural Networks*, Federal Institute of Education, Science and Technology of Ceará (IFCE), 2018.

Undergraduate Final Project Defense Committees

- **Mendes Filho, E. S.**, *Computational Offloading on UAVS* (text in Portuguese), Federal University of Ceará (UFC), 2025.
- **Moraes Freire, L. P.**, *A massively parallel GRASP approach to the Job-Shop Scheduling Problem* (text in Portuguese), State University of Ceará (UECE), 2014.
- **Oliveira Melo, S.**, *A Proposal of an integrated learning system for schools* (text in Portuguese). (text in Portuguese), State University of Ceará (UECE), 2014.
- **Facundo de Lima, T.**, *Dimensional reduction in color digital images using principal component analysis* (text in Portuguese), State University of Ceará (UECE), 2014.
- **Oliveira, G. F.**, *A Framework to Support the Achievement of Trust in Network Systems* (text in Portuguese), State University of Ceará (UECE), 2013.
- **Amaral Filho, C. A.**, *An Evaluation Analysis of Free Software Tools for Requirements Management in ERP Systems* (text in Portuguese), Christus University Center (UniChristus), 2013.

SUPERVISION ACTIVITIES

Table 3: Supervision activities summary

Level	Institution	Total
Bachelor's degree monograph	UECE	3
Young researchers supervision	UECE	3
Internship Supervision	UECE	1
Total		7

Bachelor's degree monograph supervisions: 2014

State University of Ceará (UECE), Department of Computer Science

- **Moraes Freire, L.P.** *A massively parallel GRASP approach to the Job-Shop Scheduling Problem* (text in Portuguese).
- **Samua, S.** *A Proposal of an integrated learning system for schools* (text in Portuguese).
- **Facundo, T.** *Dimensional reduction in color digital images using principal component analysis* (text in Portuguese).

Young researchers supervision: 2012

Institutional Research Scholarship Program (PIBIC), Brazilian Ministry of Education (MEC)

Supervised students under the Institutional Research Scholarship Program (PIBIC) of the Brazilian Ministry of Education (MEC), supporting young researchers. I guided Luana Samara Paulino Maia, Paulo Henrique dos Santos Alves, and Marcelina Pereira Bernardo, from the Robotics Laboratory at the Plácido Aderaldo Castelo School in Fortaleza, Brazil. The students developed an SMS system to broadcast school-related news. The research was presented at the XVII Congress of the State University of Ceará (UECE) and published in the conference proceedings.

Internship supervision 2012

State University of Ceará (UECE), Department of Computer Science

Supervised the final internship of Henrique Silva Lima for his Bachelor's degree in Computer Science. Activities took place in the Intelligent Computing Laboratory (LACONI). Guided the design and implementation of tree-based search algorithms for solving combinatorial problems.

Table 4: Summary of courses taught

Level / Degree / Institution	Module	Hours	Year(s)	Total (h)
Master's / Nano-science and nano-technologies for civil engineering/ Polytech'Lille	Introduction to OpenMP (in English)	4	2019	4
Graduate program / Computer Science / UFC	High-performance Computing	32	2013–2014 (2×)	64
Undergraduate / Computer Science / UECE	Concepts of programming languages	68	2012–2014 (4×)	272
Undergraduate / Computer Science / UECE	Data structures	68	2013	68
Undergraduate / Computer Science / UECE	High-performance computing	68	2012	68
Undergraduate / Informatics / UECE	Introduction to logic	68	2012	68
Undergraduate / Informatics / UECE	Computers architecture	68	2012	68
Undergraduate / Information Technology / UniChristus	Compilers	20	2012	20
Undergraduate / Information Technology / UniChristus	Formal languages and automata theory	20	2013	20
TOTAL	9	416	-	652

TEACHING EXPERIENCE

As shown in Table 4, I have taught over 650 hours in four higher education institutions in two countries, at the graduate and undergraduate levels. The 64 hours taught at the UFC were part of a teaching internship required for the completion of my Ph.D. in Computer Science. In addition, the Introduction to OpenMP course was taught during my postdoctoral fellowship at INRIA Lille.

WORKSHOPS AND TUTORIAL SESSIONS ORGANIZATION

Organizer – 2nd International Workshop on Parallel Optimization using/for Multi and Many-core High Performance Computing (POMCO 2020)

Co-organized with N. Melab

March 22-27, 2021

- Held as part of the International Conference on High Performance Computing & Simulation (HPCS 2020), Online Event.
- Focused on the use of multi-core and many-core HPC architectures for accelerating optimization algorithms.

Organizer – International Workshop on the Synergy of Parallel Computing, Optimization, and Simulation (PaCOS)

Co-organized with N. Melab, J. Gmys, and B. Dorronsoro.

July 15-19, 2019

- Held as part of the International Conference on High Performance Computing & Simulation (HPCS 2019).
- Explored synergies and challenges of parallel computing, optimization, and simulation.

Instructor – 11th HPC School, University of Luxembourg

November 12–19, 2021

- Organized by the HPC Research Computing and Operations team.
- Provided instructions, hands-on exercises, and guided sessions on OpenCl and OpenACC.
- Focused on enabling researchers to leverage GPU acceleration for scientific computing.

Organizer/Instructor – GRID’5000: Getting Started and Introduction to GPU Computing

Co-organized with J. Gmys and D. Delabroye.

December 7, 2018

- Taught how to access, reserve resources, and deploy jobs on Grid’5000 clusters, with a dedicated section on GPU computing.
- Tutorial organized by INRIA Lille’s BONUS Team at the University of Lille.

CONFERENCE PROGRAM COMMITTEE

- ChapelCon 25, The Chapel Event of the Year. Online in a virtual format. October 7th, 2025.
- ChapelCon 24, The Chapel Event of the Year. Online in a virtual format. June 5–7, 2024.
- V Ibero-American Congress of Smart Cities – ICSC-CITIES 2022, 2022.
- IV Ibero-American Conference on Smart Cities – ICSC-CITIES 2021, held as part of the Ibero-American Program for Science and Technology Development, 2021.
- International Workshop on the Synergy of Parallel Computing, Optimization and Simulation - PaCOS. Held as part of the International Conference on High Performance Computing & Simulation (HPCS 2020). Online event, 2021.
- International Workshop on the Synergy of Parallel Computing, Optimization and Simulation - PaCOS. Held as part of the International Conference on High Performance Computing & Simulation (HPCS 2018), 2018.

TALKS AND SEMINARS

Chapel-based Ultra-scale GPU-accelerated Optimization, invited talk. Master Program in High Performance Computing, Simulation, specialized in scientific computing. University of Lille, France. **Date: 20 Nov. 2025.**

Investigating Portability in Chapel for Tree-based Optimization on GPU-powered Clusters, invited seminar. ULTRABO Workshop, University of Lille, France. **Date: 20-21 Mar. 2025.**

Investigating Portability in Chapel for Tree-based Optimization on GPU-powered Clusters, invited talk. The Chapel Language Conference - ChapelCon 2024. **Date: 07 Jul. 2024.**

Ultra-scale Computing for Big Optimization, invited seminar. University of Malaga. T. Carneiro, N. Melab, and G. Helbecque. **Date: 01 Mar. 2024.**

Chapel-based Ultra-scale Exact Optimization, invited talk. Master Program in High Performance Computing, Simulation, specialized in scientific computing. University of Lille, France. **Date: 30 Nov. 2023.**

Towards Exascale Tree-based Big Optimization, invited seminar. Master Program in High Performance Computing, Simulation, specialized in scientific computing. University of Lille, France. **Dates: 13 Jan. 2022, 19 Feb. 2021, 07 Nov. 2019.**

GPU-based Branch-and-Bound for Solving the Asymmetric Travelling Salesman Problem, invited seminar. Seminars of the Parallelism, Graphs and Optimization Group (ParGO), Federal University of Ceará (UFC), Brazil. **Date: 11 Jan. 2013.**

GPU Computing for Solving Combinatorial Optimization Problems, invited talk. Teleinformatics Department (DETI), Federal University of Ceará (UFC), Brazil. **Date: 22 Feb. 2013.**

A New GPU-based Branch-and-Bound Algorithm, invited talk. XVI State University of Ceará Conference (UECE), Brazil. **Date: 21 Nov. 2011.**

GPU and Heterogeneous Computing, invited talk. Department of Electrical Engineering, Federal University of Santa Maria (UFSM), Brazil. **Date: 05 Set. 2010.**
